Project Title: Lana Del Rey Website

Main Page

- Needs to direct the user somewhere, I feel like moving the about section to the home page would be beneficial. You could also include buttons below (in addition to the top site navigation) that would direct the user to the other pages

About Page

- As mentioned above, move this to your home page. You could transition this page to be more in depth information on Lana del Rey (rather than an overview) which is under Wikipedia under the header "Career"

Early Life

- This is probably sufficient information, but it leaves the page feeling a little empty. This may have to move to just a small section of the about page? Not sure, it's up to you!

Discography

- I like this section and the inclusion of lyrics as you hover over the songs! I think you could maybe add a bit of copy underneath the covers from "Musical Style" on Wikipedia?
